## PREFACE

*Crop yield is the function of many factors like weather, soil fertility and water management. Of these, weather plays an important role. The yield of a crop depends on the weather conditions during a particular season. Agrometeorological observations are also useful to study the crop weather relationship and climate change studies of the region.*

*The Annual Weather Report has been published by this department every year using observed weather data at the observatory located at Instructional Farm, Department of Agronomy, College of Agriculture, Junagadh Agricultural University, Junagadh. The report carries daily, weekly, monthly, seasonal and annual weather data pertaining to all parameters like air and soil temperatures, rainfall, relative humidity, wind speed, wind direction, bright sunshine hour and evaporation. The bulletin also contains the frequency of hot days during summer, cold days during winter, cloudy days and rainy days during monsoon seasons for last 37 years (1985-2021) which is very useful for climate variability study.*

*This type of Annual Weather Report should be published at all Research Stations using their respective observatory data which will be useful for future studies. This will be useful for all the research scientists and post graduate students for interpretation of weather conditions during their field experiments. This compilation is appreciated for easy availability of weather data for all us.*

*Professor and Head  
Department of Agronomy

	Appendix-2: Standard meteorological periods and weeks	<b>42</b>

## **INTRODUCTION**

Weather conditions during crop seasons strongly influence the crop growth and development. The variation in crop productivity is mainly due to weather fluctuations. Weather and climate are the important factors determining the growth, development and yield of crops. Weather conditions affect the agricultural operations and experimental treatments also. Crop yields are the integrated result of external and internal processes that occur during the crop growing period. The external environment is the climate which regulates and the weather determines the growth and development and finally the yield of the crop. It is therefore; necessary to measure the meteorological parameters in all agricultural experimental stations. The interpretation of experimental results in the light of weather conditions prevailing during the period of crop growth is important. Weather observations are also required for accurate weather forecasting and comparison of forecasted weather.

In view of the above the weather parameters recorded at the Agro meteorological observatory, Department of Agronomy, College of Agriculture, Junagadh Agricultural University, Junagadh from 1<sup>st</sup> January, 2021 to 31<sup>st</sup> December, 2021 are analysed and presented in this report.

## **METHODOLOGY**

The daily, weekly, monthly, seasonal and annual weather data are presented along with the entire statistical parameters viz. mean, standard deviation, coefficient of variation, lowest and highest values. The year is divided into four seasons viz. winter (December to February), summer (March to May), monsoon (June to September) and post monsoon (October and November).

The hot days, cold days, cloudy days and rainy days for last 37 years (1985-2021) are also presented in this report.

- **A hot day** is a day with maximum temperature 40°C or more than 40°C.
- **A cold day** is a day with minimum temperature 10°C or less than 10°C.
- **A rainy day** is a day receiving a 2.5 mm of rainfall or more.
- **A cloudy day** is a day with less than 2.0 hours bright sunshine hours.

## **SUMMARY**

The variation and distribution of all-weather parameters viz. rainfall, temperature, wind speed, bright sunshine hours and evaporation are discussed below.

### **1. Rainfall and rainy days**

An annual rainfall of 1367.8 mm was received in 47 rainy days. Whereas, monsoon rainfall of 1227.5 mm was received in 38 rainy days during the year 2021. The rainfall during pre and post monsoon seasons 62.7 mm in 4 rainy days and 77.6 mm in 5 rainy days was received respectively in the reporting year.

The rain commenced from 19<sup>th</sup> June at normal onset of monsoon and extended up to 13<sup>th</sup> October.

### **2. Maximum temperature**

The highest maximum temperature of 42.2<sup>0</sup>C was recorded on 14<sup>th</sup> April, 2021.

### **3. Minimum Temperature**

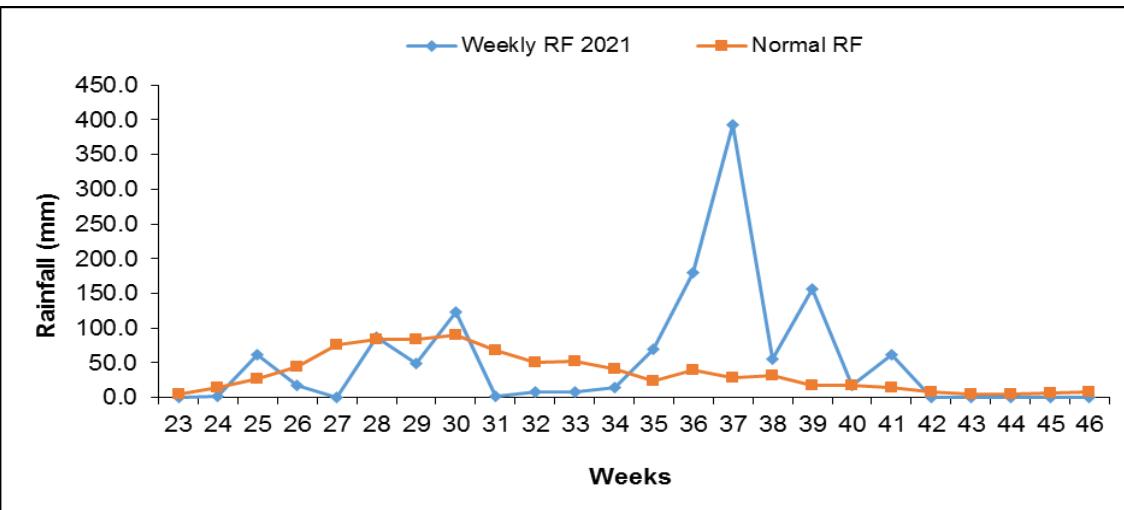

The lowest minimum temperature of 6.7<sup>0</sup>C was recorded on 31<sup>st</sup> January, 2021.

### **Summary of weather parameter during 2021**

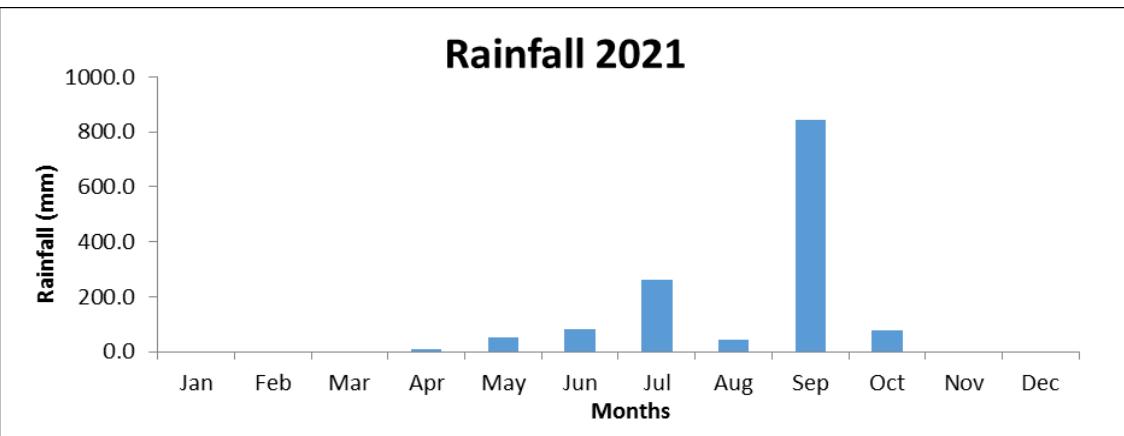

Annual rainfall (rainy days)	:	1367.8 (47)
Seasonal rainfall (rainy days)	:	1227.5 (38)
Pre monsoon season rainfall (rainy days)	:	62.7 (4)
Post monsoon season rainfall (rainy days)	:	77.6 (5)
Onset of monsoon	:	19 <sup>th</sup> June, 2021
Withdrawal of monsoon	:	13 <sup>th</sup> October, 2021
Maximum temperature	:	42.2 <sup>0</sup> C (14/04/2021)
Minimum temperature	:	6.7 <sup>0</sup> C (31/01/2021)
Wind speed	:	5.8 km/hour
Evaporation	:	5.3 mm / day
Bright sunshine	:	6.1 hrs
